

COMMAND NEXUS · CIT 140 · WEEK 1

Problem Brief

Meridian Forge Robotics · The Process Below

LEARNER Angel Saucedo	ARTIFACT Problem Brief	STATUS Working document
---------------------------------	----------------------------------	-----------------------------------

SECTION 01

Visible Failure

Nia Voss, the night QA supervisor, reported that test MR-17 began running Test K-44, an outdated test. After discovery, the operator sent a stop request/command at 02:14:02 which returned "ACTIVE_INSTRUCTION_PENDING" and kept repeating Test K-44.

SECTION 02

Verified Facts

- Fact 1 - Incident log shows at 02:14:02 the operator stop request returned "ACTIVE_INSTRUCTION_PENDING".
- Fact 2 - Current scheduling console does not show Test K-44 in the current test catalog.
- Fact 3 - Mara Ilyan confirms the pause of production in affected QA cell.

SECTION 03

Assumptions and Open Questions

- Question - Are we able to delete any traces of Test K-44?
- Question - What is legacy_sync.exe?

SECTION 04**System Environment Map****SECTION 04A****People and Roles**

It seems that all workers in the QA cell are affected by the system. Nia Voss uses the system, Elias Chen supports the system, and Mara Ilyan manages the system.

SECTION 04B**Processes and Rules**

The Current Scheduling Console controls the incident.

SECTION 04C**Information and Data**

The Incident Log, Current Scheduler, Maintenance Record, Command Telemetry, and Staff Statements are important to finding the root cause of the issue.

SECTION 04D**Technology and Tools**

MR-17 supports the work.

SECTION 04E**Environment and Constraints**

Mara Ilyan the production operations manager.

SECTION 05

Investigation Boundary

Inside the Investigation

The team will examine the full software history.

Outside for Now

Current evidence does not require a restart because it will clear the commands it's holding.

SECTION 06

Organizational Impact

The QA cell and its workers are affected.

SECTION 07

Problem Statement

The impact is a pause on production until the issue is resolved.

SECTION 08

Next Investigation Step

Before restarting the robot, we should first check the full software history as Mara Ilyan had suggested which could possibly give us more insight.
